

Brescia

ARCUS PROFESSIONAL / ONE-PAGE TERRITORY BRIEFING

The selected province requires preliminary screening for Bridge interventions. The value is not the case list: it is understanding whether Brescia has already shown concentrated vulnerability under extreme conditions or risk distributed over time.

PRIORITY INDEX 40/100 territorial exposure	COLLAPSE RATE 1.11x national rank 37	EVENTS 3 ARCUS cases in sample	EVIDENCE 9 linked sources
--	--	--	---

BRESCIA / ARCUS ATLAS EXTRACT

DECISION MESSAGE

Distributed chronic risk

historical risk distributed across multiple events and dates (33% on the most recurrent date). The 1.11x rate versus the national average places Brescia among the provinces with documented historical vulnerability above the ARCUS/AINOP benchmark. Brescia is national rank 37 by documented ARCUS/AINOP collapse rate.

01

NEXT ACTIONS

- Use the territorial exposure indicators to identify the dominant territorial signal.
- Read the documented distributed historical pattern and use individual cases as map/appendix references.
- Request the minimum technical data package for the dominant structural signal before site-specific design assumptions.
- Commission site-specific checks calibrated to the dominant structural context and local geomorphology.

DATA REQUEST PACKAGE Local hazard study; asset geometry and foundations; inspection history; source-backed site constraints.	CONFIDENCE NOTE Collapse Rate confidence: high. The AINOP denominator should be read as available bridge-census coverage, not as a perfect inventory of the bridge stock.
