

Como

ARCUS PROFESSIONAL / ONE-PAGE TERRITORY BRIEFING

The selected province requires preliminary screening for Bridge interventions. The value is not the case list: it is understanding whether Como has already shown concentrated vulnerability under extreme conditions or risk distributed over time.

PRIORITY INDEX 27/100 territorial exposure	COLLAPSE RATE 1.11x national rank 38	EVENTS 1 ARCUS cases in sample	EVIDENCE 3 linked sources

COMO / ARCUS ATLAS EXTRACT

DECISION MESSAGE

Concentrated critical event

collapses concentrated in a single critical-event scenario (2019-03-18, 100%). The 1.11x rate versus the national average places Como among the provinces with documented historical vulnerability above the ARCUS/AINOP benchmark. Como is national rank 38 by documented ARCUS/AINOP collapse rate.

01 NEXT ACTIONS

- Use the territorial exposure indicators to identify the dominant Hydraulic signal.
- Review the documented concentrated historical scenario and use the map/appendix only as case reference.
- Request TR100/TR200 hydraulic model, preliminary scour estimate, riverbed/bathymetry evidence and debris-transport indicators where relevant.
- Differentiate checks by geomorphology: torrential/confined channels require scour/debris checks; lowland crossings require flood level and duration checks.

DATA REQUEST PACKAGE

TR100/TR200 hydraulic model; preliminary scour depth; riverbed/bathymetry evidence; debris transport indicators where relevant.

CONFIDENCE NOTE

Collapse Rate confidence: medium. The AINOP denominator should be read as available bridge-census coverage, not as a perfect inventory of the bridge stock.
