

Forlì Cesena

ARCUS PROFESSIONAL / ONE-PAGE TERRITORY BRIEFING

The selected province requires preliminary screening for Bridge interventions. The value is not the case list: it is understanding whether Forlì Cesena has already shown concentrated vulnerability under extreme conditions or risk distributed over time.

PRIORITY INDEX 43/100 territorial exposure	COLLAPSE RATE 0x national rank 94	EVENTS 2 ARCUS cases in sample	EVIDENCE 6 linked sources

DECISION MESSAGE

Concentrated flood scenario

collapses concentrated in a single flood/extreme-hydraulic scenario (2023-05-19, 50%). The 0x rate versus the national average places Forlì Cesena among the provinces with documented historical vulnerability above the ARCUS/AINOP benchmark. Forlì Cesena is national rank 94 by documented ARCUS/AINOP collapse rate.

01

NEXT ACTIONS

- Use the territorial exposure indicators to identify the dominant Hydraulic signal.
- Review the documented concentrated historical scenario and use the map/appendix only as case reference.
- Request TR100/TR200 hydraulic model, preliminary scour estimate, riverbed/bathymetry evidence and debris-transport indicators where relevant.
- Differentiate checks by geomorphology: torrential/confined channels require scour/debris checks; lowland crossings require flood level and duration checks.

DATA REQUEST PACKAGE TR100/TR200 hydraulic model; preliminary scour depth; riverbed/bathymetry evidence; debris transport indicators where relevant.	CONFIDENCE NOTE Collapse Rate confidence: high. The AINOP denominator should be read as available bridge-census coverage, not as a perfect inventory of the bridge stock.
