

L'Aquila

ARCUS PROFESSIONAL / ONE-PAGE TERRITORY BRIEFING

The selected province requires preliminary screening for Bridge interventions. The value is not the case list: it is understanding whether L'Aquila has already shown concentrated vulnerability under extreme conditions or risk distributed over time.

L'AQUILA / ARCUS ATLAS EXTRACT

DECISION MESSAGE

Concentrated critical event

collapses concentrated in a single critical-event scenario (2009-04-06, 75%). The 3.71x rate versus the national average places L'Aquila among the provinces with documented historical vulnerability above the ARCUS/AINOP benchmark. L'Aquila is national rank 18 by documented ARCUS/AINOP collapse rate.

01 NEXT ACTIONS

- Use the territorial exposure indicators to identify the dominant territorial signal.
- Review the documented concentrated historical scenario and use the map/appendix only as case reference.
- Request the minimum technical data package for the dominant seismic signal before site-specific design assumptions.
- Commission site-specific checks calibrated to the dominant seismic context and local geomorphology.

DATA REQUEST PACKAGE

Local hazard study; asset geometry and foundations; inspection history; source-backed site constraints.

CONFIDENCE NOTE

Collapse Rate confidence: medium. The AINOP denominator should be read as available bridge-census coverage, not as a perfect inventory of the bridge stock.
