

The selected province requires preliminary screening for Bridge interventions. The value is not the case list: it is understanding whether Napoli has already shown concentrated vulnerability under extreme conditions or risk distributed over time.

NAPOLI / ARCUS ATLAS EXTRACT

### DECISION MESSAGE

#### Concentrated flood scenario

collapses concentrated in a single flood/extreme-hydraulic scenario (2019-12-21, 100%). The 0.39x rate versus the national average places Napoli among the provinces with documented historical vulnerability above the ARCUS/AINOP benchmark. Napoli is national rank 59 by documented ARCUS/AINOP collapse rate.

### 01 NEXT ACTIONS

- Use the territorial exposure indicators to identify the dominant Hydraulic signal.
- Review the documented concentrated historical scenario and use the map/appendix only as case reference.
- Request TR100/TR200 hydraulic model, preliminary scour estimate, riverbed/bathymetry evidence and debris-transport indicators where relevant.
- Differentiate checks by geomorphology: torrential/confined channels require scour/debris checks; lowland crossings require flood level and duration checks.

### DATA REQUEST PACKAGE

TR100/TR200 hydraulic model; preliminary scour depth; riverbed/bathymetry evidence; debris transport indicators where relevant.

### CONFIDENCE NOTE

Collapse Rate confidence: high. The AINOP denominator should be read as available bridge-census coverage, not as a perfect inventory of the bridge stock.
