

Pisa

ARCUS PROFESSIONAL / ONE-PAGE TERRITORY BRIEFING

The selected province requires preliminary screening for Bridge interventions. The value is not the case list: it is understanding whether Pisa has already shown concentrated vulnerability under extreme conditions or risk distributed over time.

PRIORITY INDEX 31/100 territorial exposure	COLLAPSE RATE 0.78x national rank 43	EVENTS 2 ARCUS cases in sample	EVIDENCE 6 linked sources
--	--	--	---

DECISION MESSAGE

Concentrated critical event

collapses concentrated in a single critical-event scenario (2022-12-01, 50%). The 0.78x rate versus the national average places Pisa among the provinces with documented historical vulnerability above the ARCUS/AINOP benchmark. Pisa is national rank 43 by documented ARCUS/AINOP collapse rate.

01 NEXT ACTIONS

- Use the territorial exposure indicators to identify the dominant territorial signal.
- Review the documented concentrated historical scenario and use the map/appendix only as case reference.
- Request the minimum technical data package for the dominant structural signal before site-specific design assumptions.
- Commission site-specific checks calibrated to the dominant structural context and local geomorphology.

DATA REQUEST PACKAGE

Local hazard study; asset geometry and foundations; inspection history; source-backed site constraints.

CONFIDENCE NOTE

Collapse Rate confidence: high. The AINOP denominator should be read as available bridge-census coverage, not as a perfect inventory of the bridge stock.
