

Teramo

ARCUS PROFESSIONAL / ONE-PAGE TERRITORY BRIEFING

The selected province requires preliminary screening for Bridge interventions. The value is not the case list: it is understanding whether Teramo has already shown concentrated vulnerability under extreme conditions or risk distributed over time.

PRIORITY INDEX 44/100 territorial exposure	COLLAPSE RATE 1.57x national rank 30	EVENTS 3 ARCUS cases in sample	EVIDENCE 4 linked sources

TERAMO / ARCUS ATLAS EXTRACT

DECISION MESSAGE

Concentrated flood scenario

collapses concentrated in a single flood/extreme-hydraulic scenario (2011-03-01, 67%). The 1.57x rate versus the national average places Teramo among the provinces with documented historical vulnerability above the ARCUS/AINOP benchmark. Teramo is national rank 30 by documented ARCUS/AINOP collapse rate.

01 NEXT ACTIONS

- Use the territorial exposure indicators to identify the dominant Hydraulic signal.
- Review the documented concentrated historical scenario and use the map/appendix only as case reference.
- Request TR100/TR200 hydraulic model, preliminary scour estimate, riverbed/bathymetry evidence and debris-transport indicators where relevant.
- Differentiate checks by geomorphology: torrential/confined channels require scour/debris checks; lowland crossings require flood level and duration checks.

DATA REQUEST PACKAGE

TR100/TR200 hydraulic model; preliminary scour depth; riverbed/bathymetry evidence; debris transport indicators where relevant.

CONFIDENCE NOTE

Collapse Rate confidence: high. The AINOP denominator should be read as available bridge-census coverage, not as a perfect inventory of the bridge stock.
