

Udine

ARCUS PROFESSIONAL / ONE-PAGE TERRITORY BRIEFING

The selected province requires preliminary screening for Bridge interventions. The value is not the case list: it is understanding whether Udine has already shown concentrated vulnerability under extreme conditions or risk distributed over time.

DECISION MESSAGE

Distributed chronic risk

historical risk distributed across multiple events and dates (33% on the most recurrent date). The 0.38x rate versus the national average places Udine among the provinces with documented historical vulnerability above the ARCUS/AINOP benchmark. Udine is national rank 60 by documented ARCUS/AINOP collapse rate.

01

NEXT ACTIONS

- Use the territorial exposure indicators to identify the dominant Hydraulic signal.
- Read the documented distributed historical pattern and use individual cases as map/appendix references.
- Request TR100/TR200 hydraulic model, preliminary scour estimate, riverbed/bathymetry evidence and debris-transport indicators where relevant.
- Differentiate checks by geomorphology: torrential/confined channels require scour/debris checks; lowland crossings require flood level and duration checks.

DATA REQUEST PACKAGE

TR100/TR200 hydraulic model; preliminary scour depth; riverbed/bathymetry evidence; debris transport indicators where relevant.

CONFIDENCE NOTE

Collapse Rate confidence: high. The AINOP denominator should be read as available bridge-census coverage, not as a perfect inventory of the bridge stock.
