

Territory Briefing: Torino

Province-level professional screening for Bridge. Built on ARCUS' systematic Italian bridge-collapse evidence base; full analytical detail is provided in the full PDF and exports.

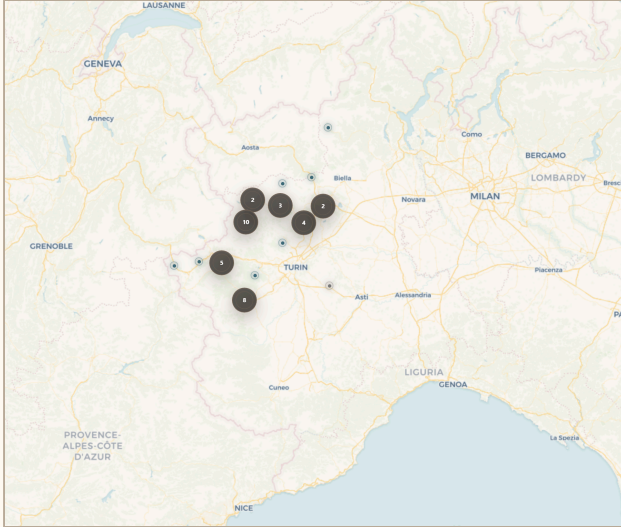

REPORT ID
ARCUS-P01-
20260609-torino

CONTEXT
Bridge

DRIVER
Hydraulic

DATE
2026-06-09

01 ARCUS Cases Map

STATIC ARCUS CASES MAP. FULL INTERACTIVE VIEW AVAILABLE IN PROFESSIONAL ATLAS.

02 Executive Signal Hydraulic / Bridge

Province-level Hydraulic signal. Use it to frame Bridge checks; confirm with site-specific data. ARCUS translates documented collapse history into operational next checks.

PRIORITY INDEX
82

COLLAPSE RATE
5.82x

CONFIDENCE
high

HISTORICAL EVENTS
42

Hydraulic exposure	97
Landslide exposure	28
Seismic exposure	28
Historical Failure Context	30

3 KEY FINDINGS Why It Matters

P1-P3 are the highest-priority ARCUS cases within the selected province and help explain the dominant territorial signal. Note: P1-P3 refer to the same 13-16 October 2000 flood event in Piemonte and Valle d'Aosta. This contextualises the signal as documented extreme-flood vulnerability, not three independent recurrent events.

- Asset: first systematic database of collapsed bridges in Italy from 2000 to today.
- Signal: Hydraulic 97 / 100.
- Collapse Rate: 5.82x national ARCUS/AINOP rate, read separately from Priority Index.
- Evidence package: 125 linked sources; run site-specific checks before design decisions.

CHECKS What To Check

- Translate the province signal into site-specific checks.
- Review P1-P3 priority ARCUS cases.
- Check Hydraulic assumptions on site.
- Use WMS overlays as screening context only.
- Document limits before design decisions.

DATA TO REQUEST Before Decisions

- Hydraulic model or preliminary hydraulic study
- Riverbed survey / bathymetry where relevant
- Historical flood levels
- Geotechnical investigation
- Foundation concept or available foundation records

Province-level screening only, not design scale. ARCUS does not certify structural safety or asset condition. Collapse Rate confidence: high. AINOP denominator is broad enough for provincial relative benchmarking.
